

I'm not robot

Continue

Samsung's fully loaded, yet easy-to-navigate app is where it makes up was next to Google's more camera app. We like feature returns, such as being able to quickly flip between the main and front cameras by switching up on the screen – it's like a big button. Taking a selfie with a gesture is also simple; you open your hand and then form a point, and it will start a countdown timer. New is the Scene Optimizer's 10 additional categories, enabling the AI to tell the difference between a cat and dog, for example, in order to fine-tune image settings. We found it to be smart enough to recognize the main subject of a busy scene, and shine things up somewhat appropriate. Suggestions shot at how to fix photos using the phone's neural processing unit (NPU). We found its real-time tips on vaccine levels and useful frame subjects, and a reticle on well group center screen. Sure, its suggestions at Times Way cut, but for the most part it's a useful addition to the camera UI. Video quality Video sees a healthy amount of improvement in 2019. The S10 Plus offers the new Digital Video Stabilisation on the rear camera and, for the first time, HDR10+ Samsung's new stabilisation technology designed to make Your Ultra HD videos look as smooth as footage from an action cam, and while the caretaker does not have the same durability, it rivals the stabilisation of the GoPro Hero7 Black. As close to a gimbal-like experience using only a smartphone, though DJI Pocket's Osmo Pocket remains our favorite for either crand-eques video list. HDR10+ video recording is a huge upgrade because Samsung's previous phone lacked the ability to support HDR files. When turned on, we found HDR10+ keeping scenes from overexposing care into additional contrast, but it also turned off saving in the new HEVC format, which produces smaller file size. HDR10+ is expanding with a 'Labs' label, so it seems to be a work in progress. Image credit: TechRadar BatteryMore spent all-day life battery with the default Full HD resolutionThe 4,100mAh battery is the largest of a Galaxy SphoneSamsung's phone charge slower than rivals, but still beat AppleThe Samsung Galaxy S10 Plus battery hits a new set for the S series with a 4,100mAh capacity. Last Year's S9 Plus was above average for Android ships, delivering all-day battery life in 3,500mAh unit, but the S10 Plus does better for us in our tests. Samsung still claims all-day life battery or a bit more, maybe because of the bigger screen here, or maybe just to play it safe. With moderate use – a couple of hours of Spotify broadcast, a healthy amount of messages and social media, an hour or two of Netflix with a shot at bank – we found it easy at the end of the night with an impressive 10% battery left. Start allowing some of the additional features on the Galaxy S10 Plus and the battery will of course take a hit, namely always-on display with changing Full HD + QHD+. The Galaxy S10 Plus comes with a host of power saving mode and more aggressively – maximum power saver – locking down the shrimp to just a few key apps (of you choose), ensuring you still get hours from you finally some percent. Samsung Wireless PowerShare in action. Image credit: TechRadar 'Wireless Power Shareless' makes phone a Qi-charging padIt's padIt by charging other devices fast, but can be a lifesaverYour friend can like this feature better than you doSamsung's new Wirelessshare feature turns the back of the S10 Plus into a great dull charging Qi, which is great if you're feeling generous when your friend runs low on battery and feel comfortable strewn some of 4,100mAh hefty capacity. It worked flawfully during our tests, enabling us to charge the Galaxy Buds in cases when we put them on the lower third of the back of the phone. Samsung hasn't shown favoritism here either: Any phone Qi charging has worked in our tests, including the iPhone XS Max. We used this feature more than we thought we might during our time at MWC 2019 – and we became quite popular. Knowing that PowerShare turns off when your phone drops down to 30 battery life is lifesaving – as is that your iPhone-owned friend has a capacity of 2,658mAh for the price of S10 Plus.Reverse wireless charging to get to the Huawei Mate 20 Pro, but Samsung makes it easier to access powerShare PowerShare via the quick settings menu of the notification shadow, whereas Huawei buries its features in a forest of submenus settings. The InterfaceSamsung one UI interface makes it easy to reach menus on large phoneBixby AI is much more annoying than it's worthless. Mainly due to the BixbyWe'd button like the view Mac/PC Samsung apps for Apple-like 'Continuity'One UI is Android 9 pie with Samsung's own wrender, making it easy to navigate menus by lining options over the bottom half of the screen – where your thumb can be reached. It's well designed. Gone are the days of the Samsung Holiday TouchWiz UI; One UI is lighter, although still clearly different from Android stock. The interface is clean, but it still has a double or even triple dose of even the pre-installed apps from Samsung, Google and Microsoft. And Samsung's won't win us over with Samsung Note if it doesn't have a desktop edition. Compared with Apple, it lacks robust continuity software to make switching between devices easier. We would like to see Samsung update Android Q in 2019 instead of taking a year to do so. Our petition to re-map the key to Bixby was at least heard. The shortcut AI can now be scheduled to launch another app, or run a Bixby quick command (basically a way to quickly configure settings such as Wi-Fi, Bluetooth, Screen, Bright, etc.). Note: The Bixby button recognizes single and double pressure, and one of these two must always launch Bixby. But the regulations follow the resupply policy. A double click now launches us into our Clash Royale addiction, for example. Dislike Bixby at all? S10 Plus trigger all-around-best Google Assistant if you time pressing on the home button. PerformanceThe quick Android phones we've ever tested the Snapdragon 855 (US version) almost as fast as iPhone XSFirst Wi-Fi 6, but asking for a Wi-Fi 6 Router to get faster speedSThe Samsung Galaxy S10 Plus is powerful enough to compete with better gaming phones today, and that means it has the top-of-the-line species inside. In the U.S., it has sank with Qualcomm's flagship Snapdragon 855, while in most other places around the world it features samsung's own Exynos 9820 chip. Its octacore chip paired with 8GB of RAM (12GB of the ultimate performance edition) provides plenty of grunt. In fact, with a multi-score Geekbench of 11,002, it's the fastest Android phone we've ever tested, though the Exynos chip noted slightly lower 10,385 and the camera app seems a slower. Samsung comes very close to matching note iPhone XS at 11,481 – straight speed was one advantage Apple has held onto its chief rival. And storage makes the S10 Plus an entirely better value, starting at a healthy 128GB, of which around 110GB is actually available to you out of the box. If not enough space, there is a microSD which supports four up to 1TB in size, or the 512GB with 1TB internal storage size – for an additional cost, of course. This is the first and next phone has -Fi 6, which allows you to transition without problems between Wi-Fi routers and is four times faster than the standard 802.11ax. It should deliver a 20 speed boost compared to the S9, although you'll need a new router to get any usage from this feature. Who is it for? Leisure people seeking the big 6.4-inch screen is the best in the world thanks to screen ratio 93.1% screen-to-body and coloured collar. And there's a current 3.5mm phone jack. What's not to like? Selfie prans although we love Google's Pixel 3 main camera best, the selfie photos from S10 Plus they look great in everything but low-light. The Point Color mode makes it so fun to use. You are a power user battery is dramatically better on S10 Plus vs previous Samsung phones. Its 'all-day battery' plays it safe – it can go a day and a half and Qi charge other devices via Wireless Power Share.Ki people in it not for? You are on a budget the cost is not for loss of heart, or scholarships. Yes, it's cheaper and a better value than the iPhone XS Max, but costs as much as a Note 9. There are phones that have better value if not needed absolute best. You tend to drop phones... a lot This is a big and slippery phone made of glass. You'll want to get a case for it if you're a butterfly and device, and maybe even invest in a warranty. Its pricing is replaced. You want the absolute best phone camera this camera is great, but it's not the best. This crown belongs to the 3 pixels. Google's phone isn't as gloves or as feature-charging, so Samsung is a better pick overall, but knows there's a better-and-shoot replacement out there. First review: March 2019Not convinced by the Samsung Galaxy S10 Plus? Check out our comparison slideshow for this alternative Phone.CompetitionImage 1 of 3 Credit: TechRadar If you want all the flagship features of the Galaxy S10 Plus in a more managed form factor and slightly cheaper price, Samsung Gallaxy S10 is the answer. Its smaller 6.1-inch display still packs a QHD+resolution, although there's just a single-camera punch camera embedded in it. You always get the same three rear cameras, Wireless PowerShare features and in-display fingerprint scanner – plus plenty of power and storage beneath the capo. • Read Samsung Galaxy 10 Review 2 in Credit 3Image: TechRadar (Image Credit: TechRadar) For the first time in a number of years Samsung will offer a more affordable version of its A-Series ship, and the Galxy S10e is set to go up against Apple's third wheel – the iPhone XR. The S10e packages a 5.8-inch display Full HD, two rear cameras and even the powerful chipsets of its largest sister. There is no curve edge in the display however, and the fingerprint scanner is located on the side, rather than under the screen. • Read our Samsung Galaxy 10e review 3 in Credit 3Image: If it's a big screen, very power and multiple, high-performing rear camera you're after, the Huawei Mate 20 Pro would be a serious consideration. There's a similar massive 6.39-inch QHD+ display of play here, plus a pile of power under the hidden and a threesome of versatile cameras on its rear. Plus there's a fingerprint scanner, although its teeth are bigger than S10 Plus.The real kicker here though is the price. As the 20 Pro mate is now six months old, its price has fallen and it can now be picked up for much less than the Galaxy S10 Plus. • Read our Huawei Mate 20 Review Pro
